Range Slider Query Editor for Date and Number Fields.

Range Slider Query Editor helps you define the numerical data and date information to the fields using the mouse instead of the keyboard.

The values are edited by finding the minimum and maximum values relating to query page when first loaded. You may edit the values using the pointers of the fields with the mouse.

You may expand or narrow the min-max range of values with the zoom-in and zoom-out buttons. Reset-Zoom button will change the values to default.
